- Notes:**
- 1. Average spot market prices are given in Canadian \$ per metric tonne.
 - 2. Market prices do not reflect special contract or pricing arrangements which may exist. The spot market prices are based on information from key network contacts, but should not be taken as the market prices being paid for residential material across Ontario.
 - 3. These prices are based on post-consumer residential materials, baled to specifications and uncontaminated.
 - 4. The CSR Composite Index is calculated using a provincial average of multi-material program composition. A detailed breakdown is available upon request.
 - 5. Effective January 2000, the calculation for the CSR Composite Index reflects broker's prices for steel (instead of mill prices).
